<b>Level 3 Management - NVQ</b> University of Newcastle (Workplace Learning)	August 2009
<b>P.G.A. cLass A</b> Professional Golfers Association	November 1983

ABOUT ME

As of December 2021 I will be a graduate of the iO Academy Full Stack Track course and am excited to be embarking on a new career path in a software development role. My knowledge attained during the iO bootcamp, along with a desire to work in a dynamic and creative environment, combined with my transferable skills from past careers in management, team leadership and mentoring, will provide me with the opportunity to become a valuable member of any development team.

Outside of work I am a keen wildlife watcher and photographer, specialising in nature and macro genres and am a member of a local photography club.

EDUCATION

**iO Academy**  
**Full Stack Track Course** Software Development

(August 2021 - December 2021)

PROJECTS

React Application- iO Academy aptitude test

Alongside being part of the dev team I acted as Scrum Master for one of three dev teams using a React application to consume a RESTful API, building reusable components to construct the UI in line with the wireframe. I worked on various aspects of the project build including CSS and user input functionality for the main test page, validation and sanitization methods.

Github: <https://github.com/iO-Academy/aptitude-test>

-----

OOP Muppet App

We built an OOP app to retrieve data from a MySQL database and display results in HTML. This was a full stack project following the SOLID principles, managed using Git & Github for version control and included search functionality and error handling. I worked on creating database connection, hydration and entity classes, as well as display classes and methods to output to the front end and unit testing methods.
