Puzzles & crosswords

Quizzes & anagram**s**

ABOUT ME

In December 2021 I graduated from the iO Academy Full Stack Track course and am now excited to be embarking on a new career path in a software development role. Along with the valuable experience gained in the iO bootcamp, my desire to work in a dynamic and creative environment and my transferable skills from past careers in management, team leadership and mentoring, will provide me with the opportunity to become a valuable member of any development team. Outside of work I am a keen wildlife watcher and photographer.

EDUCATION

iO Academy Recent Projects

React Application: iO Academy aptitude test

Alongside being part of the dev team I acted as Scrum Master for one of three dev teams using a React application to consume a RESTful API, building reusable components to construct the UI in line with the wireframe. I worked on various aspects of the project build including CSS and user input functionality for the main test page, validation and sanitization methods.

Github: https://github.com/iO-Academy/aptitude-test

OOP Muppet App

We built an OOP app to retrieve data from a MySQL database and display results in HTML. This was a full stack project following the SOLID principles, managed using Git & Github for version control and included search functionality and error handling. I worked on creating database connection, hydration and entity classes, as well as display classes and methods to output to the front end and unit testing methods.
